Instructions for Precision Web Design

Note: These will point you in the right direction, but you will need to learn your codes.

BASICS

    body background image is backimage.jpg
    body padding and margins should be set to zero
    div (default) should have no border and no margins
    Set the font using this code:
        font-family:"Times New Roman", Times, serif;
    Make sure you have a title, and all of the basic tags

MAIN DIVISION

    width: 900px wide, min-height of 600px
    Relative position
    Centered using margin-left and margin-right
    Background color: White
    Font Color: #491F0F

TOP DIVISION

    Height of 150 px
    Top image   bank.jpg
        height 150,   width 200
        floating left   alt tag present
    Font Color: #613602
    Font Size: You will need to determine. It should be as large as possible and still fit in the div.
    Relative position
    Vertically centered words
        TIP: If you want to vertically center your words, place them in a div. Style that div to have some padding on the top. Adjust the numbers until it looks right. You can also add a margin on the right of the picture to give the words a little space.

LINKS DIVISION

    Background Color   #C19662
    Link Color   #491F0F
    Hover Color   #F0BC57
    Hover Background Color   #491F0F
    Text-decoration   none normally, but underlined when the mouse is over them
    Your links need to be in an unordered list.
    Don't make the links go anywhere. Use these tags:

    Add margins to the right of the list items to space them correctly.
    TIPS: I named my link division linko. Here's how *part* of my style looked:
        #linko {background-color: #C19662;}
        #linko a{text-decoration: none;}
        #linko a:hover {text-decoration: underline;}
        #linko li {list-style-type: none; display: inline-block;}

THREE DIVS

        Style all three divisions in the center using a class. (I called my class "flo")

        Remember that in the style sheet, a class is styled with .flo and not #flo

        Give them each a width of 300 and a text-align of center

        make them float left, and use a font size of 30px

        Add the image, followed by a <br /> into each div.

        Give pictures width (240) and height (160) and alt tags.

        Afterward, add the text.

        Add this code to your images in this class. It rocks. I left off my styling for the class, but added
            a second entry so you could see.

                .flo {…... }
                .flo img {width: 240px; height: 160px; -moz-border-radius: 30px; border-radius: 30px;}

JUST TO HELP YOU

Before the words in the gold box, add this into your page

<br clear="all" />

WORDS IN A GOLD BOX

        Add a division 760 px wide, and centered.

        Give it a background color of #FCD78D

        give it a border. Here's the specs:

            2 px wide, solid, and with a color of #491F0F

            SAMPLE (but with wrong parameters) Notice no commas, and no ; until the end.
                border: 5px double red;

        You may need to add a margin to the top of this div to give space to the div.

        Add about 10px of padding inside the box.

        Add at least three lines of text. I don't care what they say. You can even add Lorem ipsum.

LINE AT THE BOTTOM

        Position must be absolute!!!

        bottom: 0px

        Background Color   #C19662

        Your words need to be in an unordered list.

        Use the correct symbol for the copyright, followed by the year and your bank name.
            (To find the code, Google the words *ascii codes html*)

        Add a fake address for the second list item

        Add a fake number for the third item (you can use the one I used)

        Center the text in the div (text-align: center)

        Add margins to the right and left of the list items to space them correctly.

        TIPS: I named my bottom division botline. Here's how *part* of my style looked:
            #botline {…}
            #botline ul {margin: 0; padding: 0;}
            #botline li {list-style-type: none; display: inline-block; margin-right: 40px; margin-left: 40px;}

When you're done, zip ALL the pictures, css (if separate) and html file together. Send the zipped file to
me.
