

## Video: Stills to Sound

This lesson is all about TIMING. On the last lesson, you learned the main tools for video editing. On this one, you need to edit videos so that they are timed to music. The easiest way to do this is with still pictures.

You are to create a music video using still images. Choose the song, and edit it (Audacity is useful for this) so that it's between one and five minutes long. You then need to add still images and transitions. Time your video so that when the song changes, the pictures change.

You will also need to add a title, and credits in the video. Make them look nice.

Send your video via email when done.

### NEED

A song, edited to be between 1-5 minutes  
Still pictures... many of them  
Time – to get it right!

### POINTS

5	Video submitted
5	Timing
2	Transitions
2	Title
2	Credits
2	At least one effect
<u>2</u>	<u>Time limits</u>

**20 TOTAL**
